### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jeffrey Bamber on September 16, 2004.

The application has been amended as follows:

#### **The Claims:**

In claim 51, line 16, after "optionally," delete "a".

In claim 51, line 16, after "wherein" insert – the total amount --.

In claim 51, line 20, delete "about".

In claim 52, line 2, delete "about".

### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance:

Note that, Applicant's amendments, Applicant's arguments, and the Examiner's Amendment are sufficient to place the instant claims in condition for allowance.

Of the references of record, the most pertinent are Han et al (US 5,102,573) or Kacher et al (US 5,891,863). Han et al liquid caustic-free, pre-spotting compositions that remove baked-on food residues from hard surfaces at ambient temperatures which comprise from about 1 to 40% of a surfactant, from about 1 to 10% of a builder, from about 0.2% to 2% of an amine, water, and solvent. See Abstract. The pH of the

Art Unit: 1751

composition is about 9 and in some instances, the pH is 10. See column 9, line 30 to column 10, line 18. Note that, all of the examples of Han et al teach compositions having a pH of 9 or 10 and there is nothing in Han et al which would point, direct, or motivate one of ordinary skill in the art to formulate a composition having a pH of at least 10.5 as recited by the instant claims.

Kacher et al teach microemulsion compositions comprising from about 20% to 40% of a specific type of anionic surfactant, from 3% to 10% of a certain type of nonionic surfactant, from about 2% to 6% of a suds booster, from about 50% to 75% of an aqueous liquid carrier, from about 2% to 7% of a liquid hydrocarbon and from 2% to 10% of a microemulsion-forming solvent. See column 2, lines 40-60. However, Kacher et al teach a required amount of surfactant which far exceeds 0.05% to about 10% of total surfactant, if present, as recited by the instant claims.

None of the references of record, alone or in combination, teach or suggest a hard surface cleaning composition having the specific pH and surface tension containing an organic solvent system, water, optionally, a surfactant, and the other requisite components of the composition in the specific proportions as recited by the instant claims. Accordingly, since the prior art fails to teach or suggest such a composition as recited by the instant claims, the instant claims are deemed allowable.

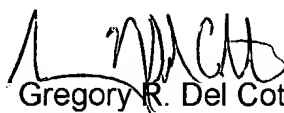

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
